Total: 23

5. 5. If you answered yes to the previous questions, please explain.

We are using this to determine correct values when the built as and occupancy are different and using the occupancy as the built as would cause the value to be incorrect. This option is there for this reason and we like using it. It does cause a problem with Laura (State Board) because it is getting pulled to either or both commercial and residential table for her analysis.
