Provide Process to Import Ag Land Data into RealWare	Stacey Lustig	Dave Chapman	The title on the work order and some of the purposes of the work order are mixed. I think we have two basic issues surrounding ag lands: 1.) We want the ability to push, in an automated fashion, our AG valuation tables to each county. These are read only by the county, except for the selected value; 2.) The ability for the county to import ag production GIS data directly into RealWare. But again, this is a county function. Obviously, what ever they import must still comply with the business rules that we set up earlier, which includes complying with any security limitations. -dc	6/2/2006 12:48 PM

I think you have hit the basics. By PIN number, 10/1/2004 9:57 AM  
the ability to import Ag tabulation of  
productivity data into Realware. This data will  
need to be in the correct format obviously, but  
the data should be processed through the same  
business logic as hand entering through the  
RealWare interface. Problem records should be  
isolated into an error report.
